Anxiety data set

Research question 1		
Variable name	**description**	**how to calculate**
Group	ADHD (1) versus no diagnosis (2)	
Lack Anxiety	the Asics scale for study/test taking anxiety. Note high score = less anxiety.	
Sympchcklst**gen** (there are 22 of these, indicated by the numbers 1-22 following the variable name)	Anxiety with regard to **Life in general** Specifically for GAD (generalized anxiety disorder)	**Generalized Anxiety** Add the following Sympchcklst**gen** variables 5, 8, 9, 15, 18, 23 to create a total score (e.g. restless, concentration, anxious, irritable, sleeping, fatigue) <mark>Note: look at the end of the data set, most of these computed variables have been done and can be seen there, look at variable view to see the descriptions)</mark>
Sympchcklst**gen** (there are 22 of these, indicated by the numbers 1-22 following the variable name)	Anxiety with regard to **Life in general** Specifically for panic attack	**P**anic attack Add the following Sympchcklst**gen** variables 1,7,13,16,22 to create a total score (e.g. nausea, losing control, palpitations, trembling, dizzy)
Sympchcklst**academ** (there are 22 of these, indicated by the numbers 1-22 following the variable name)	Anxiety with regard to **academics** Specifically for GAD (generalized anxiety disorder)	**Generalized Anxiety** Add the following Sympchcklst**academ** variables 5, 8, 9, 15, 18, 23 to create a total score (e.g. restless, concentration, anxious, irritable, sleeping, fatigue)
Sympchcklst**academ** (there are 22 of these,	Anxiety with regard to **academics**	**P**anic attack

Variable name	description	how to calculate
indicated by the numbers 1-22 following the variable name)	Specifically for panic attack	Add the following Sympchcklst**academ** variables 1,7,13,16,22 to create a total score (e.g. nausea, losing control, palpitations, trembling, dizzy)
Research Question 2		
Variable name	**description**	**how to calculate**
ADHDsym (there are 18 of these indicated by the numbers 1-18 following the variable name	Symptoms of inattention or hyperactivity/impulsivity	Inattention Add the 9 odd numbered items (e.g. 1,3,5,7…..) Hyperactivity/impulsivity Add the 9 even numbered items (e.g. 2,4,6,8…)
This research question also used the anxiety scales described in research question 1		
Research Question 3		
Variable name	**description**	**how to calculate**
Gender		1 = female
Year		1 = freshman…..5=grad student
This research question also used the anxiety scales described in research question 1		
Research Question 4		
Variable name	**description**	**how to calculate**
This compares the variables for Sympchcklst**gen** to the variables for Sympchcklst**academ** (described above)		
Sorry I ran out of time here, the variables for research question 5 (tests of cognitive ability such as working memory) are all in the data set, you can find them if you look at the variable view.
